

We are growing. Are you?

Ogone is looking for a **SYSTEM ENGINEER** m/f
for our Brussels HQ

YOUR JOB

Your main responsibility is to maintain and improve the Ogone IT infrastructure (production and non production) together with your colleagues. You have to make sure that our payment platform keeps up availability, manageability and performance despite of the continuously increasing business requirements and growth.

After an internal training period about our products and services, you will be an Ogone System Engineer allowing you to:

- Be in charge of the monitoring and maintenance of our complete infrastructure (switching, routing, firewalls, servers, etc.)
- Be able to identify which latest trends and technologies might have fit with our environment and its requirements
- Empower standardization in our environment and perform automation of operational tasks where possible
- Take the availability, integrity, security & recoverability of Ogone's infrastructure as a personal objective, assure it is compliant with our business requirements and SLA and propose solutions/evolutions to improve this objective
- Perform project related to our environment with a focus on increasing performance, availability and scalability of our infrastructure
- Monitor security and system events and take appropriate action in case of incident including taking part in the off-hours monitoring rotation of the environment
- Provide reporting (daily/monthly/yearly) on our infrastructure performance and be able to perform proactive trend-analysis and growth forecasting based on indicators given by your management

YOUR QUALITIES

For this challenging IT function, we need a talented and passionate System Engineer whose curiosity for technology drives him to polyvalence.

- Higher education in IT/Engineering or equivalent by experience
- Very good bilingual (French & English), knowledge of Dutch and German are assets
- Mature and accountable
- At least 5 years of experience with at least 3 years in management of an IT infrastructure in a mission critical environment with 24/7/365
- A proven experience in at least 4 or more of the following areas:
 - Firewall and VPN (Checkpoint), Routing (Cisco), Switching (HP Procurve), Load balancing (Cisco), SSL Certificates, General networking (TCP/IP, DNS, HTTP/S, SMTP, FTP, tunneling), Virtualization (VMWare ESX), Proxy (Bluecoast), Web application firewalls, MS Windows Server and Active directory administration, Vulnerability scanning and remediation, Log correlation and event alerting systems, Backup/restore and assorted operations, SAN storage (HP)*
- Security minded and, ideally, already involved in the implementation of security standards
- Strong analytical skills, problem solving ability and stress resistant capability
- Thorough, methodical and business minded
- Flexible
